

Introduction

Welcome to your first hands-on lab! In this guide, we will walk through the foundational steps required to start working with Apigee X. The first part involves provisioning a new Apigee X trial instance using the Google Cloud Platform console. The second part will be a guided tour of the Apigee X user interface to familiarize you with the key components where you will be building, managing, and monitoring your APIs.

2. Learning Objectives

By the end of this lab, you will be able to:

- Provision a new Google Cloud project.
- Successfully provision an Apigee X trial (evaluation) organization.
- Navigate to the Apigee X UI from the Google Cloud Console.
- Identify and describe the main sections of the updated Apigee X interface.

3. Prerequisites

- A Google account (e.g., a Gmail account).
- A valid credit card for Google Cloud identity verification.
- Access to the internet and a modern web browser.

Part 1: Setting Up Your Apigee X Trial Account

In this section, we will walk through the Apigee X provisioning wizard.

- **Step 1: Create a Google Cloud Project**

1. Navigate to the Google Cloud Console:

<https://console.cloud.google.com/>

2. In the top menu bar, click the project selection dropdown and then click "NEW PROJECT".

3. For Project name, enter

apigee-dev-course.

4. Select a Billing account when prompted.

5. Click "CREATE".

- **Step 2: Enable the Apigee API**

1. Ensure your new

apigee-dev-course project is selected.

2. In the search bar, type "Apigee" and select it from the results.
3. Click the "ENABLE" button. This may take a minute.

- **Step 3: Start the Apigee Provisioning Wizard**

1. After the API is enabled, you will be on the Apigee dashboard. Click the link or button to

"Try Apigee for free in your own sandbox for 60 days". This will launch the provisioning wizard.

- **Step 4: Configure Apigee Settings**

1. Choose a

Hosting location geographically close to you.

2. Authorize the wizard to

Configure Connection for service networking.

3. Leave the

Analytics hosting region as the default.

- **Step 5: Provision and Wait**

1. Click the "PROVISION" button.
2. **IMPORTANT:** Provisioning can take 30 to 60 minutes. You can leave the page open and come back to it.
3. You will see a confirmation message when it is complete.

Part 2: Navigating the Apigee X Interface

Now that your Apigee instance is ready, let's explore the user interface.

- **Step 1: Access the Apigee UI**

1. From the Google Cloud Console, with your apigee-dev-course project selected, navigate to the main menu (hamburger icon ☰).
2. Scroll down to the "Integration Services" section and click on "Apigee".
3. This will automatically launch the Apigee X UI in the main console, taking you directly to the "Overview" page for your organization.

- **Step 2: The Guided Tour** The Apigee UI is organized into several logical sections on the left-hand navigation menu. Let's walk through the key areas:

1. **Proxy development:** This is where you will spend most of your time as an API developer.
 - **API proxies:** The main area for creating and managing your API proxies.
 - **Shared flows:** For creating reusable sets of policies and logic.
 - **API monitoring:** To get insights into the health of your APIs.
2. **Distribution:** This section is for managing how your APIs are exposed to consumers.
 - **API products:** Where you bundle your API proxies into products.
 - **Portals:** To create and manage a developer portal for your APIs.
 - **Developers & Apps:** Where you manage the developers and client applications.
 - **Monetization:** Tools to create and manage rate plans for your API products.
3. **Analytics:** This is your window into the performance and usage of your APIs.
 - **API metrics:** A powerful dashboard for viewing API traffic, latency, and error rates.
 - **Custom reports:** To build your own detailed reports.
4. **Management:** This section is for managing the configuration of your Apigee environment.

- **Instances:** For managing your Apigee runtime instances.
 - **Environments:** Where you manage your deployment environments. For your trial, you will have an eval environment.
5. **New Capabilities:** You will also notice several new advanced sections, including **Advanced API Security**, **API Observation**, and **API hub**, which provide enhanced security, discovery, and governance features.
